NOTES OF THE CAMPUS

PROFESSOR WRIGHT RESIGNS

Professor C. A. Wright, who has been on leave of absence from the University doing research work for the National Carbon Company of Cleveland, has resigned from the teaching staff of the Department of Electrical Engineering. He found it

Mr. E. C. Higgy at the Control Board at WEO

impractical to leave his work to return to the University at the present time.

A. I. E. E. ELECTS NEW OFFICERS

The following officers were chosen at the last dinner meeting of the student branch of the Institute:

Chairman, A. B. Crawford; senior vice-chairman, J. H. Hackenberg; junior vice-chairman, R. H. Spry; secretary-treasurer, L. G. Stewart; Engineer's Council, G. R. Lawrence.

Professor Caldwell gave an interesting talk on "The History of Lighting." He traced the various types of lighting used, from primitive fat lamps to the huge incandescent lamps used in modern street lighting practice. Specimens of the lamps discussed were shown.

DELEGATES ATTEND A. I. E. E. CONVENTION

The Middle Eastern District Convention of the A. I. E. E., held at Bethlehem, was attended by Professor Caldwell and A. B. Crawford. On the 23rd, the day after the convention, a conference of counselors of University branches was held. H. E. Dyche, E. E. '06, was present as the counselor of the University of Pittsburgh.

INSPECTION TRIPS

The annual season of inspection trips has arrived. Last week Robinson Laboratory was deserted, the Electricals and Mechanicals were tak-

ing their Eastern inspection trip, which includes Cleveland, Buffalo, Niagara Falls and Pittsburgh.

The schedule of the trip is planned to the minute. Here is a sample:

12:35—Walk to the Y. W. C. A. restaurant for lunch.

1:30—Walk back.

2:45—Walk to, and visit, the plant of The Niagara Wallpaper Company.

The Chemical Engineers left May 2. They visited Akron, Cleveland, Buffalo, Niagara Falls, Rochester, and Pittsburgh. Among the plants inspected were The Ohio Salt and Chemical Co., The Grasselli Chemical Co., The Hooker Electro-Chemical Co., and The Eastman Kodak Co.

The Ceramic Engineers returned Saturday from a trip of inspection to the important plants in this section of the country.

The Civils had a little inspection trip all their own. They made a one-night jaunt to Newcomerstown, Ohio, to see a new railroad bridge moved into place, without interrupting traffic.

ENGINEERING DRAWING

Prof. F. G. Higbee of the Department of Engineering Drawing at Iowa State University, visited the Ohio State Department of Engineering Drawing. Professor Higbee was the exchange

Mr. Fay MacDowel at the Power Board at WEO

professor for Prof. O. E. Williams, several years ago when Professor Williams went to Iowa.

CERAMIC ENGINEERING

On April 12, Professor John Younger of the Department of Industrial Engineering, addressed the student organization of The American Ceramic Society. Professor Younger spoke on, "The Relation of Sales to Business Volume."

The First Rock Drill

It is said about 42nd Street and Broadway that sooner or later nearly everyone passes that way. So when you are in New York, be sure to come on down to 11 Broadway and see Simon Ingersoll's first rock drill.

We of the I-R family find this drill a daily inspiration in our work, and enjoy showing it in its protecting coat of gold leaf to our college friends. Compared with the "Jackhammer" of today, which is 20 times as powerful, the first rock drill serves as a milestone from which to measure the progress made in compressed air engineering during the past half-century. Nowadays, you will find I-R Drills and Air Compressors wherever rock is drilled, be it in New York, in the Orient, or in the South Sea Islands; and you will find an I-R representative within easy reach. You may possibly find that this representative comes from your own school. There are at least 1000 college graduates in the manufacturing, the sales, and the service branches of this world-wide organization.

CAMPUS NOTES

(Continued from Page 12)

METALLURGICAL ENGINEERING

The following officers were elected at the spring election of the Metallurgical Society: president, Clifford E. Carlson; vice president, Ralph R. Leo; secretary-treasurer, Kenneth L. Emmert.

A group of the American Society for Steel Treating which has been organized recently in Columbus held its opening meeting on Friday evening, April 29, at the Neil House. The organization of this group has been in answer to a much felt need in this city for an organization representative of iron and steel industries and technology. Men from many of the leading plants of the city are now included in the rapidly growing membership of this group which at the time of the first meeting counted forty-five active members. A feature of the organization of the A. S. S. T. is their willingness to open their membership to students of the institutions of learning at greatly reduced rates.

ARCHITECTURE

Professor Chubb will spend the week of May 16 in Washington attending the convention of "The Association of Collegiate Schools of Architecture."

The students in Architecture, in conjunction with the Department of Fine Arts, will conduct an exhibition of their work in the University Library during the month of May.

George Merkle and Arthur T. Brown of the graduating class of June, '27, have been selected to represent the Department of Architecture at the "Foundation of Architectural and Landscape Architecture," which is held at Lake Forest, Illinois. They are to compete with students of Michigan, Illinois, and Iowa for a period of three months. The student and landscape architect whose work is judged the best will receive a scholarship providing a year's travel in Europe. In 1926 this scholarship was won by Franklin G. Scott, Arch. '26.

CIVIL ENGINEERING

More civil engineering students than usual have taken, or are going to take civil service examinations this year. Heretofore comparatively few have desired to enter public service which is so largely the province of the civil engineer, as shown by recent government bulletin, listing 3223 engineering positions with Uncle Sam, of which the majority required civil engineering training.

Besides the government, the states and cities are holding examinations. Half a dozen seniors and juniors took the recent examination given for Ohio highway engineer, and three seniors and two juniors took the City of Dayton examination. A large program of railway grade crossing elimination is being started there, by approval of bond issue involving about \$25,000,000 during the next ten years.

MINING ENGINEERING

The Mining Engineers have been entering the intramurals with much success. Two bowling trophies have been won, and to date the horse shoe team has been unbeaten.

Mr. R. E. Hueberger is preparing a thesis on "Oil Mining in Ohio." He is attempting to outline a more efficient method of mining oil.

**"SPEED
IN
TRANSPORTATION"**

Accuracy makes high speed possible. GRINDING makes possible accuracy -with rapid production- of the many vital parts of these great engines of commerce.

Among the hundreds of automotive parts being finished by GRINDING are: crankshafts, camshafts, pistons, piston pins, gears and rear-end housings.

The great railroad systems, too, benefit from GRINDING - piston rods, pistons, link bars, air brake parts, manganese steel frogs and switches -and car wheels.
